

A Complete Solution

Business today moves forward at a blistering pace with so much to consider: cost effectiveness, production efficiency, environmental impact. Heavily affected are the vital supply chain processes key to consistent returns. Unfortunately, even now, many businesses maintain archaic paper-based requisitioning and receiving systems, leading to inevitable human error, unnecessary waste, and low staff productivity.

UltraNova is more than just robust supply chain management software, it's a complete supply chain solution from the ground up. From source to settlement, UltraNova handles requisition requests electronically, filtering requests through in-depth user-defined approval hierarchy trees and spending thresholds, automatically sending the requisition to the appropriate approver or back to the requisitioner for modification.

Modular and Centralized

UltraNova's expertly designed, award winning supply chain management solution includes modular software, every component tying into a centralized SQL database. Approved requisitions automatically convert into electronic purchase orders, deliverable to vendors via the internet. UltraNova tracks vendor modifications, allowing businesses the power to approve and deny before finalizing the order. Once finalized, everything is delivered into integrated receiving and inventory modules.

Green, Efficient, Smart

The benefits are many and clear: paper trails eliminated, environmental footprints dramatically reduced, and human error potential minimized; data is entered once at the beginning of the process and electronically carried over as required.

UltraNova continuously garners numerous industry awards and countless positive testimonials from satisfied clients. Visit us at carlosfaro.com for a free information package and consultation.
